

Your home always
under control.

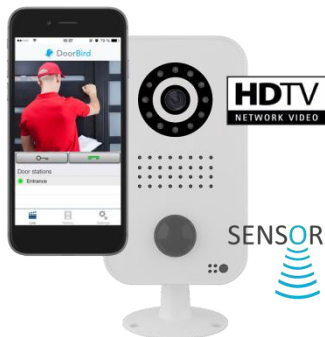

DoorBird

Quality for a safer home.

AVAILABLE: www.doorbird.com

MSRP: \$349

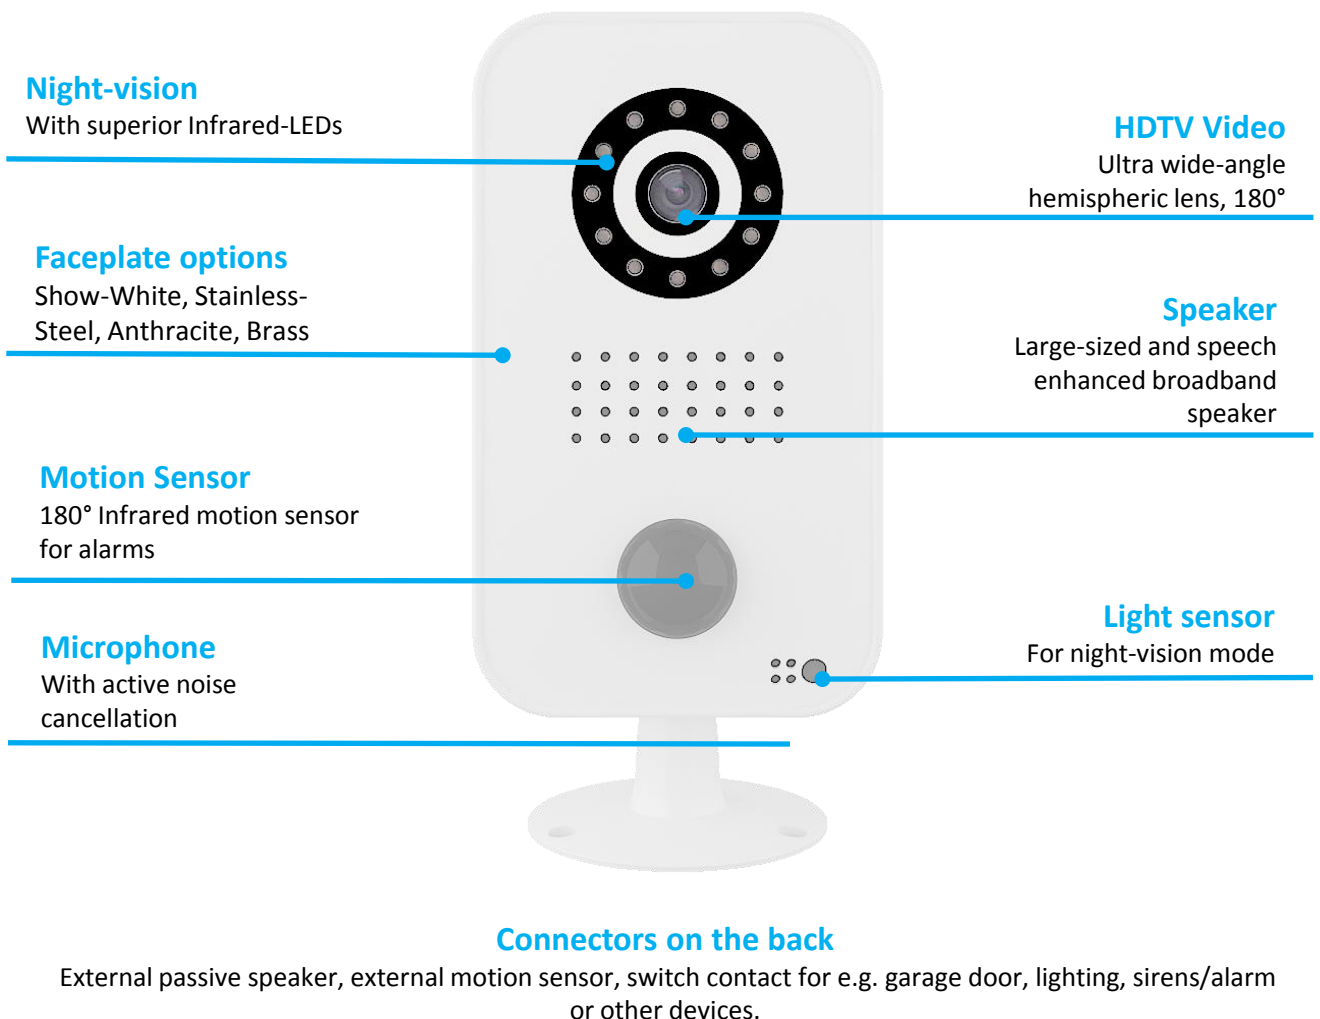

BirdGuard

The BirdGuard is the ideal addition to your DoorBird. You can see what the visitor does after you have opened the door.

Thanks to the integrated motion sensor you will immediately receive a push-message to your Smartphone if someone has entered your property.

You can speak to the visitor through an integrated speaker and receive his reply. If necessary, you can also connect an external high-performance speaker. This will enable you to trigger a >100dB alarm sound and chase the visitor away. Or you can also record and replay a predefined sound, such as a dog barking. This may result in more than 90% of burglaries being abandoned.

What is the visitor doing?

The BirdGuard is the ideal addition to your DoorBird. You can see what the visitor does after you have opened the door with the DoorBird:

Motion sensor

You are always aware of activity at your residence. The integrated motion sensor alerts you via a push-message to your Smartphone, if an unwelcome visitor appears.

External speaker

The BirdGuard features an integrated amplifier. You can connect high-performance external speakers and generate volumes up to 100 dB.

Chase away potential burglars

You can address a potential burglar through the speaker and chase him away. If he does not leave immediately, trigger the dog barking sound or siren.

Smart Home Security

You can react to unwelcome visitors in your home from anywhere in the world with your BirdGuard and chase them away by speaking loudly, dog barking or with the connected siren/alarm sound.
