

# musiphone<sup>®</sup> CR-200.

Features:

single-desk call-recording

recording on USB flashdrive stick

## Range of application

**musiphone<sup>®</sup> CR-200** is a single-desk call-recording unit. It provides the opportunity to record telephone calls on USB flashdrive stick for later storage and replay on PC. The recording of a conversation on the flashdrive stick is done in a coded format with password protection. Those files are protected if they are sent via email.

The included Windows software is to be installed on a PC or laptop. The only requirement is a free USB port for the flashdrive stick from which the recordings are imported into the PC. The transferred files can be tagged with a comment concerning names of the company and person or any other notes.

The most convenient and clear storage functionality of the PC software offers many ways to look up and open files via date, time, name or company. The recording can be played back via the soundcard of the PC.

The **musiphone<sup>®</sup> CR-200** is connected between the desk telephone and handset or directly to the analogue line of the telephone. The integrated speaker of the CR-200 enables open listening of the telephone call during recording in addition.

## Benefits

- automatic or manual recording
- easy installation, connecting cables and power supply
- recording to USB flashdrive stick independently of a PC
- coded files with password-protection
- PC software for archiving with stamp of date/time etc.
- playback of the recordings via soundcard of the PC
